

ABSTRACT OF THE DISCLOSURE

The video camera has an opening for removal of a cassette tape. The video camera includes a cassette detecting portion 2 detecting ejection of the cassette tape from the opening, and a cassette insertion preventing mechanism 5 preventing re-insertion of the cassette tape when the cassette detecting portion 2 detects ejection of the cassette tape. As such, a video camera for a recycling system can be provided where a recording medium or the like with a recorded content is easily and rapidly available to a user and a dedicated reproducing device is not required.
